VEL'SHAUN BYERS

Killeen, TX | (816) 809-7899 | vellbyers@gmail.com | Active Top Secret/SCI | U.S. Army Veteran
Portfolio: Professional Portfolio

PROFESSIONAL SUMMARY

Active TS/SCI clearance - Senior Full-Stack Software Engineer and Platform Infrastructure specialist with 5+ years of experience delivering secure, scalable solutions for defense and government clients. Proficient in C#/.NET MVC full-stack development with deep React and front-end expertise spanning HTML5, CSS3, and JavaScript — including production applications, legacy-to-React migrations, and modern component architecture using hooks and custom state management. Hands-on experience containerizing and deploying full-stack applications with Docker, Kubernetes, and AWS (EKS, ECR, RDS), with infrastructure managed via Terraform and GitHub Actions CI/CD pipelines. Well-positioned to contribute to GovCloud modernization and command-and-control system sustainment, with a practical background in Agile/SAFe delivery and security compliance within classified government systems.

EXPERIENCE

Senior Platform Developer *Mar 2024 – Dec 2025*

Koniag Gov Services – Dept. of State (Remote)

- Architected and deployed 3 enterprise pilot applications for the Department of State, all delivered ahead of schedule under strict federal deadlines, driving delivery through Agile/SAFe sprint cycles, Jira backlog management, and cross-functional stakeholder alignment.
- Designed and implemented role-based access control (RBAC) dashboards enforcing secure data visibility across department workflows, applying access management patterns aligned with NIST security controls.
- Integrated third-party REST APIs (Google Translate, reCAPTCHA) to extend platform capabilities and strengthen application security posture, a pattern directly applicable to cloud service integrations in AWS GovCloud environments.
- Supported versioned production deployments including regression testing, validation, and post-deployment verification to ensure platform stability, data integrity, and rollback readiness.
- Developed interactive JavaScript front-end dashboards and KPI visualizations for the Department of State, translating complex operational data into clear, role-specific views that supported executive decision-making and mission tracking across department workflows.
- Collaborated cross-functionally in Agile (SAFe/Scrum) ceremonies; applied modularization and reusability best practices to reduce technical debt while mentoring junior team members on clean code standards.

ISSO (Information Systems Security Officer) *Aug 2023 – Mar 2024*

L3 Harris – Rochester, NY

- Implemented NIST RMF across enterprise-level classified government information systems, establishing secure configuration baselines that directly inform secure C#/.NET application development and automated security scanning within CI/CD pipelines.
- Conducted automated security audits using Splunk and PowerShell scripting, monitoring system integrity and enforcing compliance with classified systems policies.
- Performed continuous monitoring (CONMON) of security controls; executed vulnerability assessments using Nessus and SCAP tools to identify and remediate threats in real time.
- Utilized eMASS to prepare and submit Authority to Operate (ATO) documentation; collaborated with the IS security team on full RMF lifecycle activities.

Software Engineer *Jun 2023 – Aug 2023*

MSI Solutions – Randolph AFB, TX (Remote)

- Designed and deployed the TQA site as a React.js single-page application for the Air Force Education Department at Randolph AFB — building reusable components, managing application state, and delivering a responsive HTML5/CSS3 interface that replaced a static legacy site.
- Led migration of legacy ETCA application data to SharePoint Online, a direct analog to the GovCloud migration patterns central to this role, ensuring full data integrity and operational continuity throughout the transition.
- Built automated workflows using PowerApps and low-code/no-code platforms, reducing manual process overhead and accelerating feature delivery for Air Force personnel.

Software Developer / Junior Systems Administrator *Jan 2023 – Jun 2023*

Kings Technology Inc – Navy Warfare Center, Panama City Beach, FL

- Designed and delivered full-stack web applications in a C#/.NET MVC architecture to fulfill Navy Warfare Center government contracts, taking ownership of feature design, implementation, and testing within Agile sprint cycles in a secure DoD environment.

- Built and deployed interactive C# and JavaScript features for the NAVSEA SPO web portal — including dynamic calendar components, HTML5/CSS3 layouts, and custom UI workflows — improving usability for government end-users and reducing manual administrative overhead.
- Researched, evaluated, and documented a containerization migration strategy using Docker, Kubernetes, and Terraform, producing a technical assessment that informed the program's cloud infrastructure roadmap and supported modern CI/CD deployment pipeline adoption.
- Maintained secure coding standards and participated in peer code review cycles within a classified environment, enforcing quality, DoD security compliance, and documentation best practices across the codebase.

Squad Leader / HR Specialist (42A) *Sep 2018 – Feb 2021*
U.S. Army – Fort Hood, TX

- Led a 5-person team in high-stakes operational missions, earning recognition as an exceptional soldier for superior leadership, mentorship, and adherence to Army Core Values.
- Analyzed inventory and logistics data to identify trends, forecast resource needs, and optimize allocation across battery operations.

Jr. Front End Developer *Aug 2017 – Sep 2018*
Acellus – Kansas City, MO

- Built production React applications from the ground up — architecting reusable component libraries, implementing React hooks (useState, useEffect, custom hooks) for state and lifecycle management, and delivering responsive HTML5/CSS3 UIs used by thousands of students and educators.
- Modernized legacy HTML/CSS interfaces by migrating to React component architecture and TypeScript, improving maintainability, enforcing strict typing across the UI layer, and reducing regression surface for future development.
- Developed cross-platform responsive websites using TypeScript, Vue, Bootstrap, SASS, HTML5, CSS3, and JavaScript within a collaborative Git workflow, consistently shipping features on sprint cadence.
- Directed over 2,000 hours of mentorship and hands-on development with junior developers on assigned deliverables, establishing early leadership in a technical team environment.

PORTFOLIO PROJECTS

Predictive Maintenance Dashboard *Personal Project*
React · JavaScript · HTML5/CSS3 · FastAPI · scikit-learn · Claude AI · Docker · Kubernetes · AWS EKS · Terraform · GitHub Actions

- Built a production-grade full-stack predictive maintenance application with a React + JavaScript dashboard frontend (HTML5/CSS3) and a FastAPI + PostgreSQL backend, integrating scikit-learn ML models and the Claude AI API for intelligent maintenance predictions and natural language insights.
- Containerized the full application stack using Docker and Docker Compose for local development, then deployed to AWS EKS via Kubernetes manifests — managing container images through AWS ECR and infrastructure through Terraform IaC.
- Implemented a complete GitHub Actions CI/CD pipeline that automatically builds, tests, and deploys on every push to main, supporting regression, smoke, and integration test stages across environments.

Java Spring Boot Banking App *Personal Project*
Java · Spring Boot · OOP · Docker · Terraform · GitHub Actions · AWS EC2 · Blue/Green Deployment

- Built a Bank Account Management System in Java Spring Boot demonstrating all four OOP principles — encapsulation, inheritance, polymorphism, and abstraction — with Maven build tooling and a structured REST API layer.
- Dockerized the application and defined AWS infrastructure as code using Terraform, enabling repeatable provisioning of EC2 environments and supporting Blue/Green deployment with zero-downtime rollback capability.
- Implemented a GitHub Actions CI/CD pipeline that builds, tests, and packages the application on every push to main, automating the full delivery workflow from commit to deployable artifact.

Developer Portfolio (velshaun-byers-portfolio.vercel.app) *Personal Project*
React · Vite · TypeScript · JavaScript · HTML5 · CSS3 · Framer Motion · Vercel CI/CD

- Converted a static HTML/CSS portfolio into a fully component-based React application using Vite — decomposing the UI into modular JSX components and applying semantic HTML5 and modern CSS3 to produce a responsive, accessible layout.
- Implemented advanced React patterns including useState/useEffect for scroll-driven behavior, typing animation with interval management, framer-motion scroll-reveal animations, and react-scroll for smooth section navigation.
- Connected to GitHub for automated Vercel deployments on every push to main, demonstrating CI/CD discipline in a personal project context.

TECHNICAL SKILLS

Languages & Frameworks: C#, .NET MVC, Java, Python, JavaScript, TypeScript, HTML5, CSS3, React, Vue, Bash, SQL
React & Front-End: React Hooks, custom hooks, component architecture, state management, Vite, TypeScript + React, framer-motion, responsive/mobile-first design, HTML5 semantics, CSS3/SASS/Bootstrap
Infrastructure & Automation: Ansible, Terraform, PowerShell, Bash scripting, Infrastructure as Code (IaC)
Containerization & Cloud: Docker, Docker Compose, Kubernetes (EKS), AWS (EKS, ECR, RDS, EC2, S3, GovCloud-familiar), container-based deployment, Blue/Green deployments
CI/CD & DevOps Tools: GitHub Actions, Jenkins, GitLab CI/CD, Bitbucket, Jira, Confluence, Artifactory, Git
Test Automation: Selenium, Cypress (familiar); CI/CD-integrated test pipeline design; regression, smoke, and integration testing
Operating Systems: Linux (RHEL/Ubuntu), Windows Server, virtualization environments
AI & Machine Learning: Claude API (Anthropic), OpenAI APIs, scikit-learn, predictive modeling, LLM-powered application development, prompt engineering
Security & Compliance: NIST RMF, ATO/eMASS, Splunk, Nessus, SCAP, CompTIA Security+
Platforms & Tools: SharePoint Online, PowerApps, Unqork, ServiceNow
Methodologies: Agile (Scrum, SAFe), CI/CD integration, sprint planning, backlog refinement

CLEARANCE & CERTIFICATIONS

- Active TS/SCI clearance
- CompTIA Security+
- Full Stack Web Development Certification (Python – PDX Code Guild)
- Unqork Novice Developer Badge
- ITIL 4 Foundation

EDUCATION

B.S. in Information Technology *Expected Jan 2027*
Western Governors University – Salt Lake City, UT

Python Full Stack Web Development Certification *Jul – Oct 2022*
PDX Code Guild – Portland, OR
